

## LUMIVISIONS FROSTED CAST SATINO

LumiVisions Frosted Cast Satino series are designed to offer a palette of soft pastel colors with the aesthetic appeal of sandblasted glass thru-and-thru the sheet or panel. The luxurious perception of these products is further enhanced by a matte finish surface texture. These translucent products allow enough light transmission to create a bright and open impression, while obscuring nearby objects.

## APPLICATIONS

LumiVisions Frosted Cast Satino acrylic sheets are ideal for:

- » P.O.P. Displays            » Menu Boards            » Signage
- » Backlit Walls            » Bars/Countertops      » Partitions
- » Store Fixtures            » Lighting                » Privacy Panels

## AVAILABILITY

LumiVisions Frosted Cast Satino acrylic sheets are currently offered in 11 standard colors and in thicknesses ranging from 1/8" - 3/4". Sheet sizes are limited to a nominal 4' x 6' Matte finish or textured finishes. Gloss finish sheets are available in 4' x 4', 4' x 5', and 4' x 6'.

## CUSTOM COLORS

LumiVisions Frosted Cast Satino acrylic sheets are also available in any custom color. Be creative, expand your choices by designing your own frosted product.

## PHYSICAL PROPERTIES

LumiVisions Frosted Cast Satino acrylic sheets have the same physical properties as standard cell cast acrylic sheets. However, additional coating options for specific applications that require resistance to UV light, harsh chemicals, graffiti, etc. are available. Also, the composition of the sheets can be altered to ease thermoforming, allowing deeper draws than typical cell cast acrylic.

## FABRICATION

LumiVisions Frosted Cast Satino acrylic can be cut, drilled, routed, laser cut, glued, formed, hot stamped, and silk screened like any other standard acrylic sheet. It is also ideal in applications that require other acrylic products to be used in combination with the Frosted without the need for mechanical fasteners or complex adhesives.

## COLOR GUARANTEES

While every effort is made to guarantee a perfect color match every time, variations in pigment, dyes, or monomer may cause minor color variations in the finished sheet products of each subsequent production run. This is a normal characteristic of the material and is not considered to be a defect. Therefore, care should be taken to avoid mixing products from separate production runs where accurate color matching is required.

## IMPORTANT NOTE

Cast Acrylic is subject to variations in thickness slightly beyond what is commonly experienced with extruded or continuous cast acrylic sheet. This is to be expected and is the nature of the material. Samples are representative of production but are not guaranteed to be an exact color match to actual production runs. Due to computer monitor display differences, the colors on this brochure are representative, but are not exact matches of the actual acrylic products. Samples of actual product should be requested for approval prior to placing an order.
